

## Innovative solutions:

### Behavioral Analytics

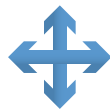

- Catch insider threats
- Catch account takeovers
- Automated anomaly detection
- Compares users to peers
- Finds deviations in activity

### Situational Awareness

- Dashboard presenting all systems
- Consolidate all incident data and alerts
- Enriches alerts with correlated data
- Manage the investigative process
- Track incident resolution, history, audit trail

### Detect Advanced Evasions

- AED: Detects over 800 Advanced Evasion Techniques
- Full stack, multilayer traffic normalization
- Deployable immediately as add-on
- Integrates into existing security devices (Ex. NGFW, IPS)
- Free updates of AET/AED database

### Zero-Day Malware Detection

- Deployable immediately as add-on
- Full dynamic Code Analysis AND STATIC Code Analysis
- Single product for web, Email, file-share, standalone detection
- Centralized deployment and management for all products
- Shared threat intelligence with rest of solution improves security posture

## Hot Topics:

### Consolidation and Integration

- End "tool sprawl" through smart consolidation
- Better integration saves labor costs (admin and cyber warrior)
- Market leader products at lower cost
- Reduce complexity and achieve faster results
- Future-proof your environment

### Mobile device protection

- Market and industry leader in mobile device protection
- Unmatched ease of use and low impact on device
- Most up to date threat data base for mobile devices
- Detect threats in real time without interrupting cell service
- User installable with simple download

## SDC: Putting the 'Value Add' Back in VAR!

SDC partners with industry leading virtualization & data protection vendors.

Star Partner  
Professional Service Certified

# Full suite of products:

All of these products can be managed in one place with one interface. Administrators and cyber security professionals.

## NextGen FireWall (NGFW)

- Centralized management and integration
- Best-in-class high availability and price/protected Mbps
- 100% stability, 100% protection: out-of-the-box

## Intrusion Prevention System (IPS)

- Market leading network threat defense
- Centralized visibility and control for better OPEX.
- Scalable performance for throughput and data retention

## End-Point Security

- Windows, Mac, Unix, Mobile all on same platform.
- CPU level integration

## Security Information Event Management (SIEM)

- Next Generation SIEM: Easier implementation, faster results
- Cost effective, usually cheaper than renewal cost of competitors!

## Identity Management

- Clear market leader in traditional products
- Advanced contextual progressive challenges change the game.

## Network Access Controller (NAC)

- Better results and easier to manage than competition
- Does not require an agent to be installed

## Data Loss Prevention (DLP)

- Multiple solutions available depending on agency needs
- All integrate into centralized management and control

## Email and Web Security

- Consolidation of products offers better OPEX and CAPEX
- Protects against variety of attacks and threat vectors

*The Swish Data methodology will help you reach your goals — expertly engineered architecture, seamless, stress-free deployment and continual support to capitalize on your deployment success.*
