SwishData
DATA PERFORMANCE ARCHITECTS

Mitigate the Cyber Warrior Challenges and Attain the Mission with Optimized, Robust SwishData Solutions

Advanced Solutions—Better Equipment for the Cyber Warrior

Partner with SwishData to change the game and protect your assets with a best of breed for traditional cyber security systems and advanced forensic and behavioral analytics in the identification of hackers and insider threats. SwishData offers a more effective solution with reduced product costs and administrative management while providing the addition of intelligence to your cyber infrastructure.

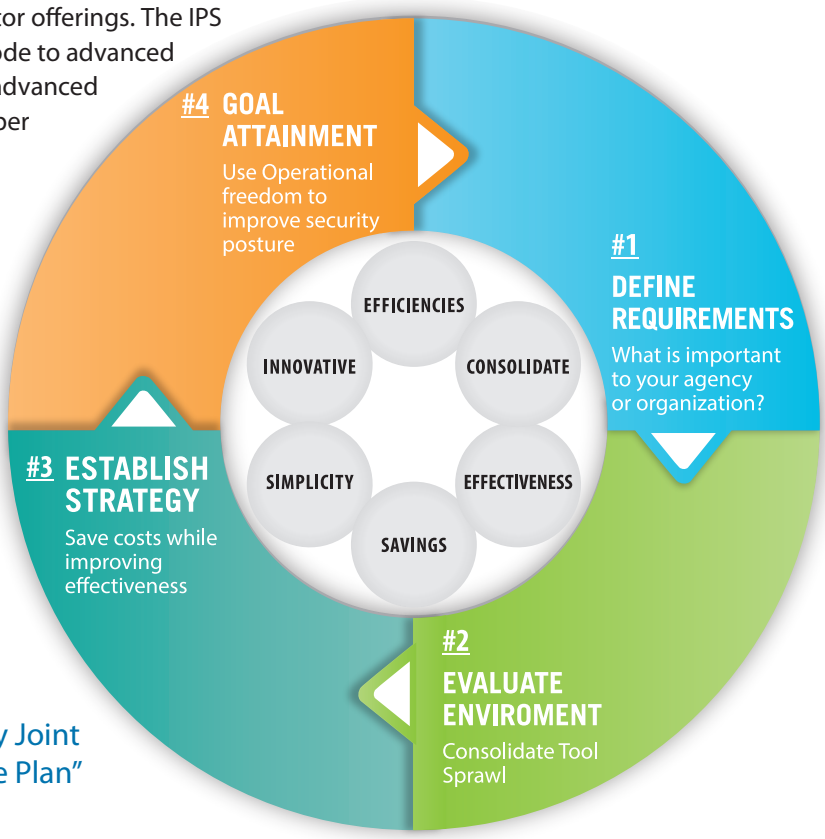
Partner with SwishData to change the game and protect your assets with a best of breed for traditional cyber security systems and advanced forensic and behavioral analytics in the identification of hackers and insider threats.

The SwishData technology utilizes integration and advanced analytics that are normally not available through competitor offerings. The IPS solutions send suspicious code to advanced threat detection (ATD) and advanced evasion detection (AED). Cyber threats that were previously unidentified are remediated through component integration, including the end-point. Analytical solutions intake data from multiple sources to perform not only a comparison of logs and alerts for an in-depth threat identification, but more importantly behavioral base lining to identify outlier activity.

SwishData can lower your administrative, cyber warrior costs and ROI to foster greater adherence to compliance translating into a more effective cyber warrior. The impact can be significant with SwishData technologies in the current climate of budget restraints, limited manpower and unrelenting, persistent cyber attacks.

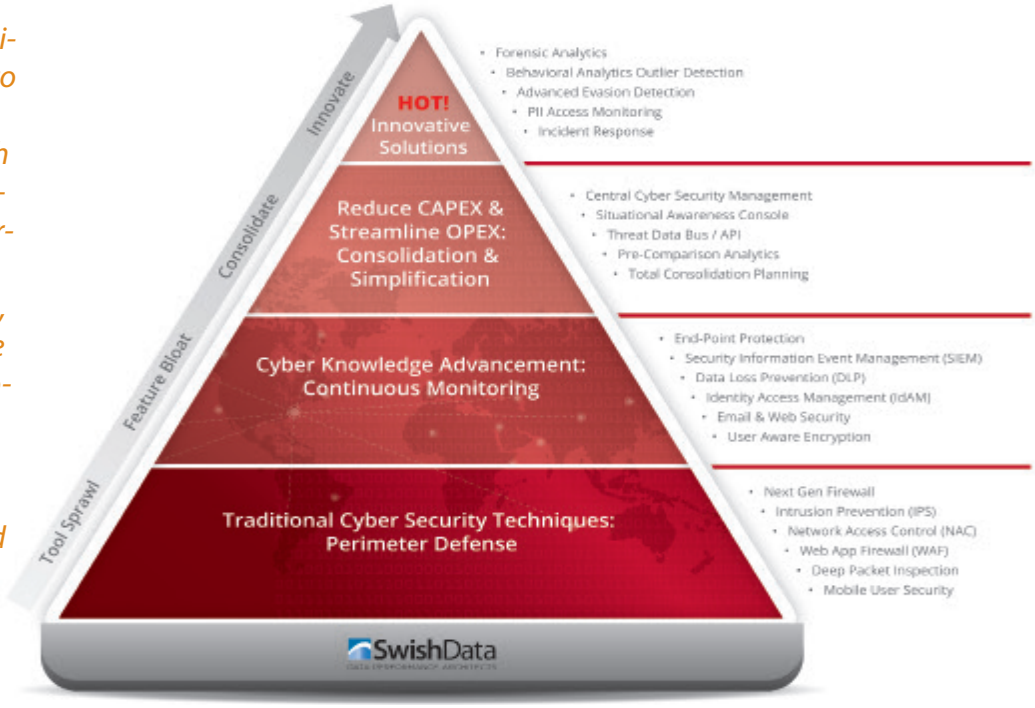
Ensure Your Data Infrastructure

SwishData ensures your data infrastructure integrity and performance to your exact requirements, from conception through solution deployment. Our solution implementation includes in-depth assessment and requirements formulation, plan and engineering design, cost-effective procurement, seamless transition and comprehensive training and continual operations evaluation and solution enhancement.



SwishData Cyber Security Joint "Game Plan"

- *Consolidation and Simplification of "tool sprawl" to save OPEX and CAPEX.*
- *Reduce the noise through intelligent assisted prioritization of threats, vulnerabilities and alerts.*
- *Automation of low value, labor intensive, repetitive tasks to free up cyber professionals for high value duties.*
- *Innovative, cutting edge intelligence for advanced*



Innovative Cyber Security Solutions

Consolidation and Simplification

Central command for the security environment and a seamless integration of engineered technologies. The goal is to replace "Tool Sprawl" with consolidated and integrated products that save OPEX and CAPEX, while enabling cyber warriors to be more effective.

Perimeter Defense

Safeguard, detect and alert of unauthorized attempts to access internal network with an integrated suite of products. A Firewall; proxy-based or NextGen, utilizing NGFW technology for faster insight into all layers including deep packet inspection. An intrusion prevention system (IPS) that scrutinizes incoming traffic. Network access controllers (NAC) monitors and authenticates attempts to connect to network by end-point devices and security tools are utilized specifically for mobile user devices.

Continuous Monitoring

Surveillance tools to monitor the internal network for suspicious activity via end-point protection, SIEM, data loss prevention (DLP) through USB, CD, DVD, etc. and Web application firewall (WAF) for protection through firewalls, load balancing, DOS attack and malware. Email and web security are stringently under surveillance and encryption is utilized to secure data throughout the network environment.

Innovative, Cutting Edge Analytic Solutions

Advanced technology tools that are normally not available through competitor offerings such as situational awareness via a dashboard of product options, AED to identify detection evasion techniques, forensic analysis garnered from end-point, SIEM, IPS, firewalls and MS-AD analytics merger and ATD to diagnose threats.

SwishData can change up the game against cyber threats with lower administrative expenditures and innovative technology collaboration to equip your agency with a rigorous defense shield.
