

## SwishData Corporate Overview

### Background

SwishData is an engineering-first company. We are known for our ability to innovate and provide technical solutions. We help you select the right technologies for your environment and develop detailed project plans with proven execution methodologies from past performance.

Cyber Security and Data Center Infrastructure are our specialties. We have been providing these information technology solutions to Federal and Local Government customers for over a decade. Deployments include technical sales and leasing, project development, project management, technical design, implementation, training, and administrative technical support services.

### Advanced Solutions for the Cyber Warrior

SwishData changes the game and protects your assets with best of breed for traditional cyber security systems and advanced forensic and behavioral analytics in the identification of hackers and insider threats. We offer a more effective solution with reduced product costs and administrative management while providing the addition of intelligence to your cyber infrastructure.

SwishData ensures your data infrastructure integrity and performance to meet your exact requirements, from conception through solution deployment. Our cyber solution implementation provides in-depth assessment and requirements formulation, planning and engineering design, cost-effective procurement, seamless transition, and comprehensive training with continual operations evaluation and enhancement. Our innovative cyber solutions include:

- Consolidation and Simplification of "tool sprawl" to save OPEX and CAPEX and enable efficiencies
- Reduce the information overload through intelligent assisted prioritization of threats, vulnerabilities and alerts
- Automation of low value, labor intensive, repetitive tasks to free up cyber professionals for high value duties
- Innovative, cutting edge intelligence for advanced evasion detection (AED), anomaly detection and forensic analysis

### Expertise for your Data Infrastructure

SwishData provides expert-level sales and engineering in every element of a successful deployment. We manage the entire implementation lifecycle and make sure your solutions perform exactly the way you need them to. Our capabilities include:

- Private Cloud and Consolidation
- Virtualization and Virtual Desktop Infrastructure
- Tiered Enterprise Storage
- Data Backup, Recovery and DR/COOP
- Application Delivery and Network Performance

## Competency

We are cyber security and data performance architects. This means SwishData ensures the security, performance and affordability of your data and network infrastructure, through both architecture and deployment. Our goal is not simply to add technology that incrementally improves your environment, but to build and deliver solutions whose components work together to magnify their collective capabilities in support of your mission-critical cyber landscape and data infrastructure.

## Credentials

SwishData is a small, woman-owned business currently registered with sam.gov. We have a workforce of cleared staff members to meet the most stringent of security requirements.

Reference our linecard for more information on the multiple contract vehicles, sourcing options and technologies available from SwishData.

## Summary

SwishData can change the game against cyber threats with lower administrative expenditures and innovative technology collaboration to equip your agency or organization with a rigorous defense shield. Likewise, our expertise ensures the performance and affordability of your agency's or organization's data infrastructure through both architecture and deployment.
